IVF and Fertility Treatments

Unlock your doors to parenthood. We provide the best in class fertility treatment that fits your needs.

IVF(In Vitro Fertilisation)

In-Vitro Fertilization is an Assisted Reproductive Technique that helps with fertilization, embryo development and implantation, making pregnancy easier. It is a safe technique with a high success rate in achieving a successful pregnancy and having a healthy child.

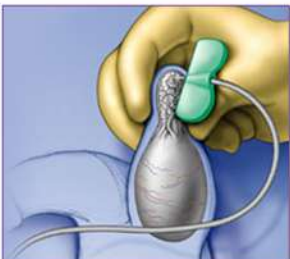

IUI(Intrauterine insemination)

Intrauterine insemination (IUI) is a type of fertility treatment that is done to facilitate fertilization by placing sperm inside the female uterus.

ICSI(Intracytoplasmic Sperm Injection (ICSI)

Intracytoplasmic sperm injection (ICSI) involves picking up a single sperm via a fine glass needle & injecting it directly into each egg.

PESA(Percutaneous Epididymal Sperm Aspiration)

PESA is a procedure used when the reason a couple cannot conceive a child is male infertility. We provide PESA treatment as a sperm retrieval process for men who have obstructive azoospermia or lack of sperm in semen.

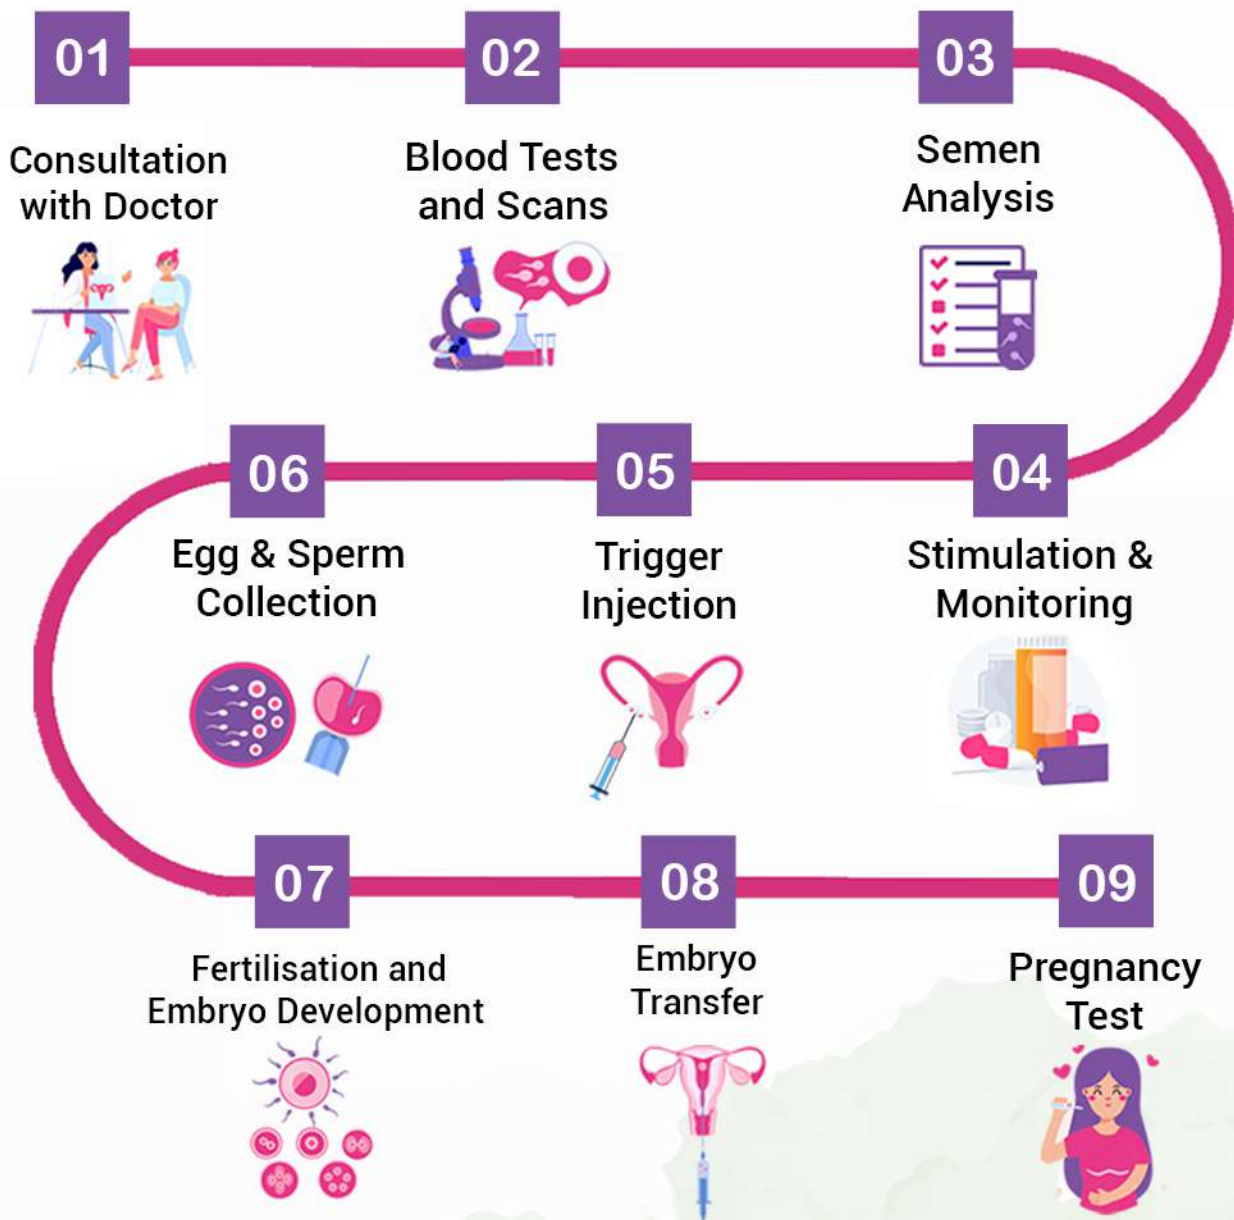

TESA

TESA is a treatment method used in cases of male infertility. We carry out TESA treatment as a sperm retrieval process for men whose sperm count in the semen is poor to nil. It is an invasive technique where we extract the sperm from the tubules of the testis.

IVF Procedure

IVF involves several steps – ovarian stimulation, egg retrieval, sperm retrieval, fertilization and embryo transfer. One cycle of IVF can take about two to three weeks. More than one cycle may be needed.

The IVF treatment takes approximately 6 weeks.

Mother-Child Care

Our World-Class **Mother and Child Care** Hospital
Guides You From Pregnancy to Postpartum

Painless Normal Delivery

We focus on making the delivery process as comfortable as possible.

Caesarean Delivery

Our skilled surgeons are experts at Caesarean delivery, thus sending the mother home in perfect health as soon as possible.

High-risk Pregnancy

We focus on providing exceptional care to high-risk pregnancies.

NICU

The Neonatal Intensive Care Unit or NICU at the Janisthaa Hospital is a specialised care unit for newborn babies.

Child Vaccination

We provide high-quality vaccination for your newborn and growing child.

Gynaecology

Making World-Class **Women's Healthcare** Accessible

Menorrhagia

Menorrhagia refers to abnormally heavy or prolonged bleeding during the menstrual period. At Janisthaa, you can effectively cure such a debilitating illness such as Menorrhagia.

Fibroid Treatment

Gynaecologists at Janisthaa Hospital have effectively treated and surgically removed fibroids for numerous patients. You can resume your normal life after the treatment and recovery period.

Hysterectomy

Gynaecologists at Janisthaa have successfully done several hysterectomies, saving women from painful and uncomfortable conditions.

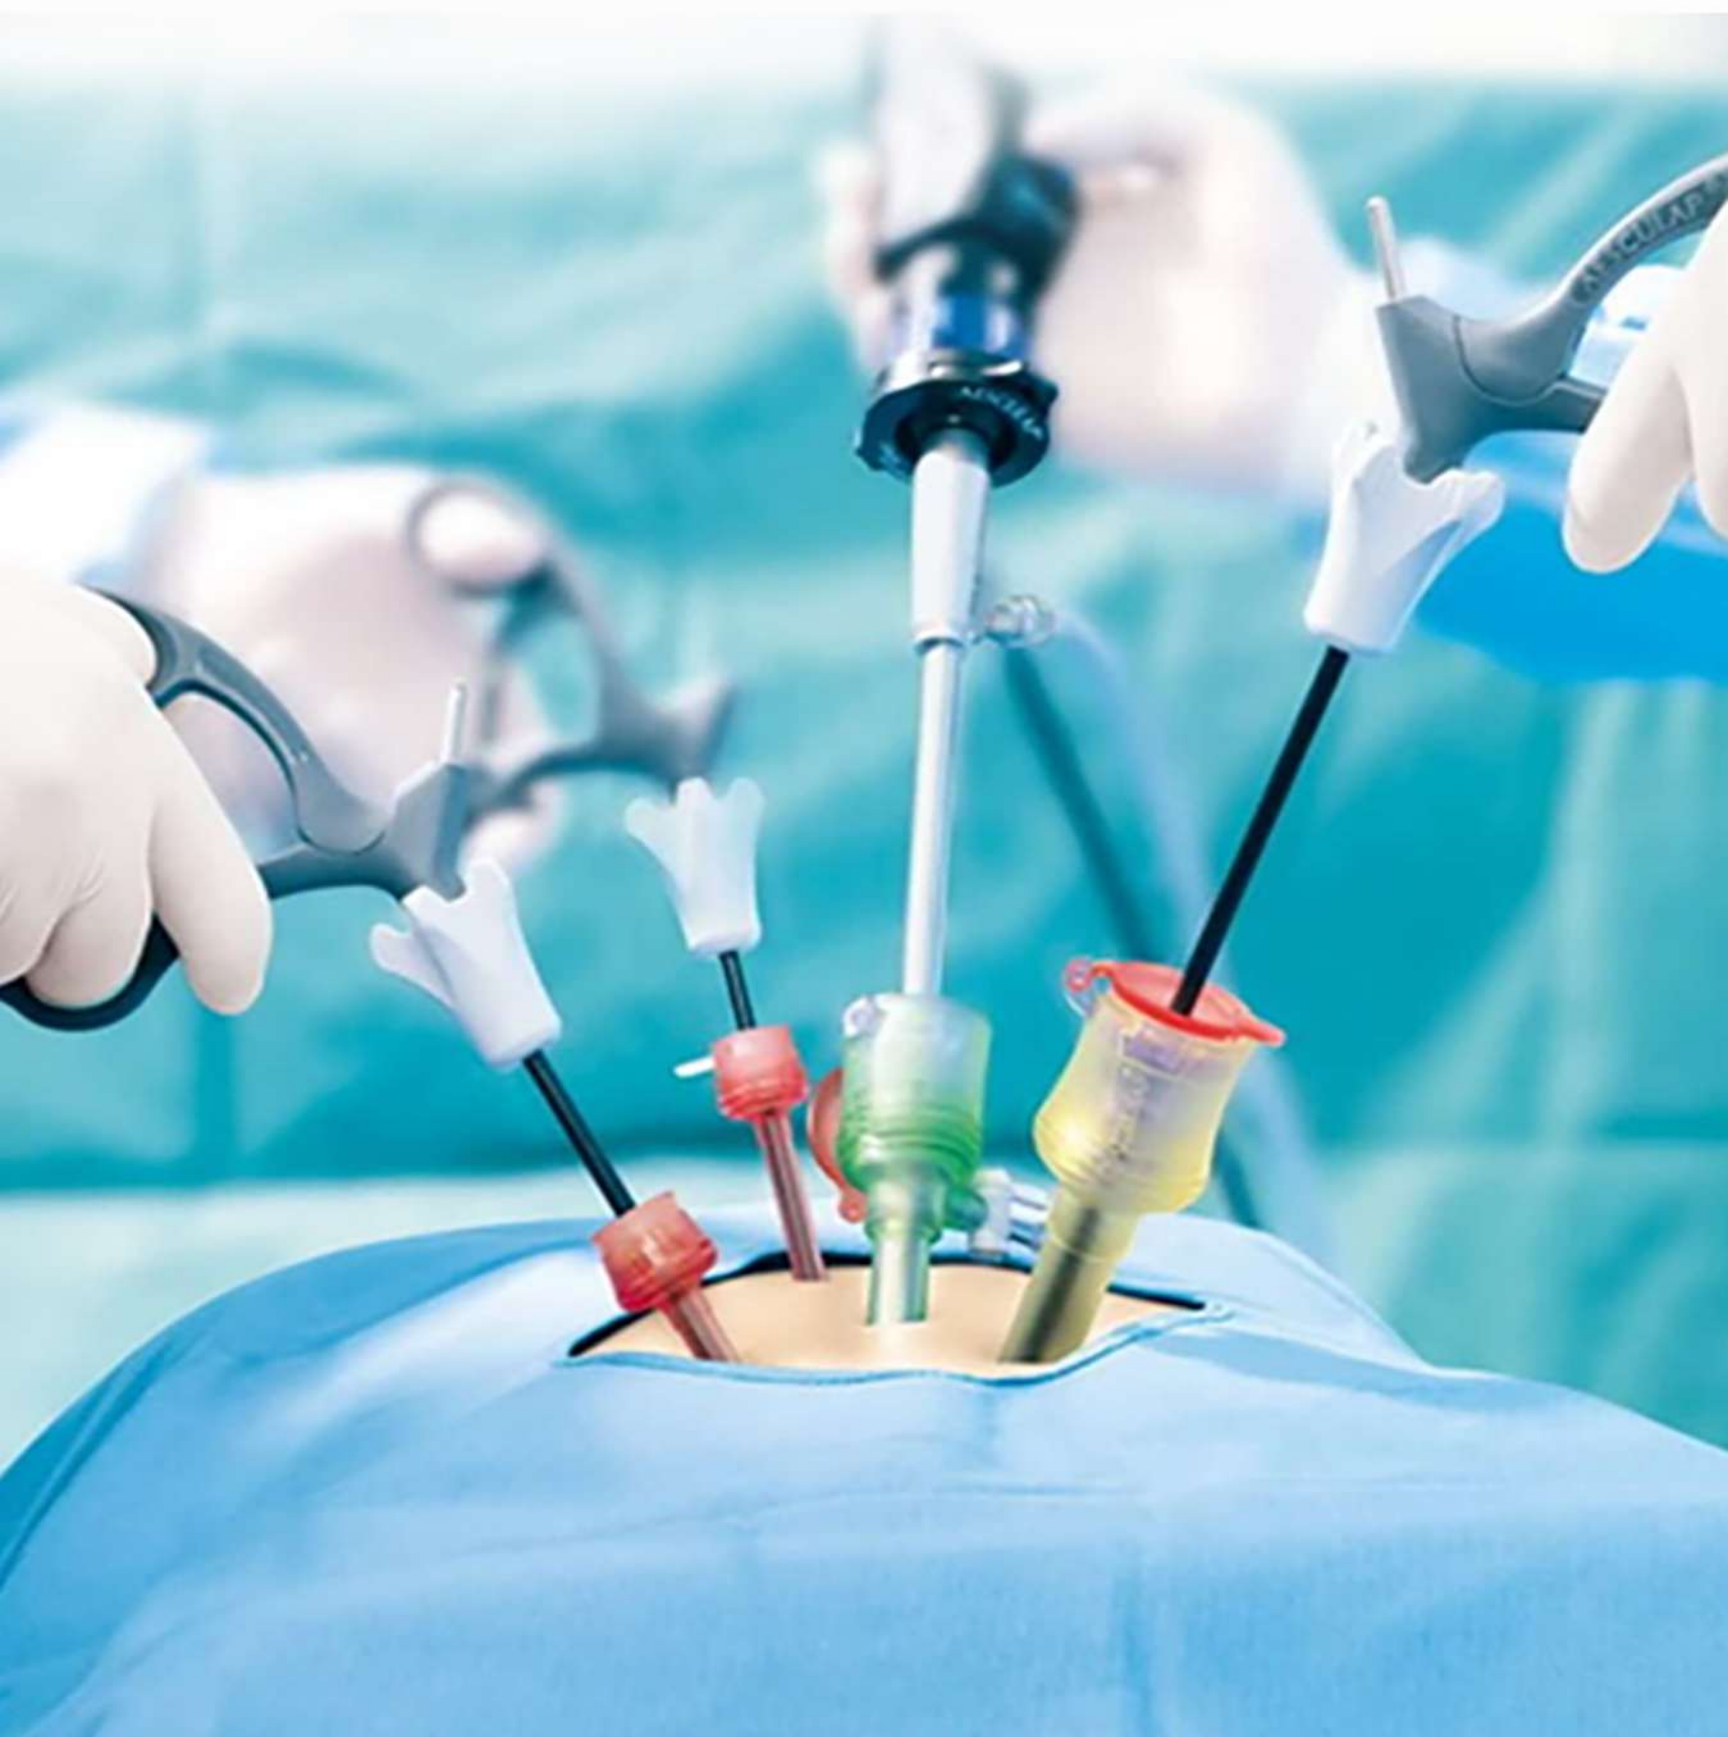

Ovarian Cyst and Hymenoplasty

An ovarian cyst is a fluid-filled or solid sac around or inside an ovary. Hymenoplasty refers to the surgical reconstruction of the torn hymen. Contact our gynaecology department to know more in detail.

Vaginal Tightening

Women may experience decreased sexual pleasure, loss of sensitivity and urinary incontinence. This can be effectively corrected by a cosmetic procedure called vaginal tightening.

Laparoscopy Surgical Treatments

Choose Good Health and Relief with Janisthaa Hospital's General Surgery.

Fibroid Removal

Laparoscopic fibroid removal is a procedure that is commonly done in women who have fibroids. Non-cancerous fibroids are removed in this minimally invasive procedure from the woman's uterus.

Hysterectomy

Laparoscopic hysterectomy is the removal of the female reproductive organs, either fully or partially, via a laparoscopic procedure. The laparoscope is inserted through a small incision in the vaginal or abdomen area.

Ovarian Cyst Removal

Ovarian cysts commonly occur in women of reproductive age. It is a fluid-filled or solid sac formed in and around the ovary. It can be removed via laparoscopic ovarian cyst removal.

Appendix Removal (Appendectomy)

A laparoscopic appendix removal is a procedure to remove an inflamed appendix in the least invasive method possible. It is a common procedure that can be done with little to no risk.

Gallbladder Removal(Cholecystectomy)

A gall bladder is where bile juice collects in the digestive system. It may develop gallstones which can be very painful. Laparoscopic surgery can help you remove it without having a full open surgery.

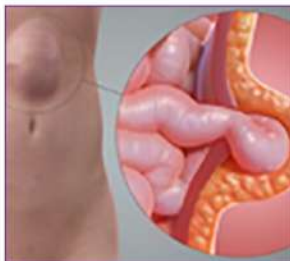

General Surgery

Choose Good Health and Relief with Janisthaa Hospital's General Surgery.

Gallbladder Removal

Gallbladder removal or cholecystectomy is a common surgery done via a keyhole with the help of a tiny video camera to assist. It is usually removed if there are gallstones in the gallbladder, which can cause immense pain.

Hernia Treatment

A hernia is a common condition where a portion of tissue bulges through muscles. It may cause pain and difficulty in bending, lifting hefty objects etc. The surgeons of Janisthaa have expertly rectified numerous cases of hernia.

Appendix Surgery

Appendectomy is a commonly done surgery in the general surgery department. It can be either laparoscopic surgery or open surgery. We handle emergency cases of appendectomy as they are done to cure acute appendicitis.

Varicose Vein Treatment

A varicose vein is a common condition in men and women where the veins in the back of the legs bulge. It can be treated through surgery. It is removed through procedures like sclerotherapy, laser treatment, phlebectomy etc.

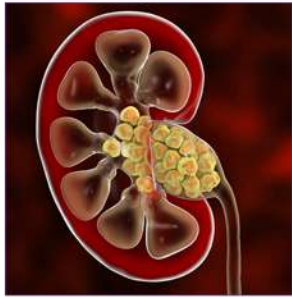

Thyroid Surgery

Thyroid removal through thyroidectomy occurs when there is a cancerous or noncancerous enlargement or overactive thyroid. It is partially or entirely removed.

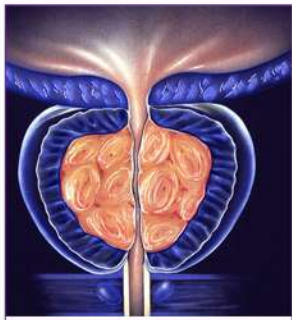

Urology

Comprehensive Solutions for Your **Urology** Problems

Kidney Stone

Kidney stones can be a painful condition that affects people of all ages and genders. It can also cause severe infection and discomfort. At Janisthaa, we ensure our patients find relief and return to good health. We provide advanced and painless kidney stone removal at the most affordable cost.

Prostate Enlargement

An enlarged prostate is a common condition among men as they grow older. It can make urination difficult and sometimes painful. An enlarged prostate can be treated at our department of urology as we have the experience and access to the latest diagnostic testing, urodynamic and pressure flow studies.

Urinary Tract Infection (UTI)

UTI is a microbial infection of the urinary tract that can cause fever and other discomforts. It is a common ailment in people of all ages and genders. We are equipped with the best diagnostic facilities that quickly diagnose and evaluate your condition to make the journey to healing faster.

Dermatology

Find effective & practical skin solutions to healthy, flawless skin that brings out your true beauty.

Acne Management

Acne is a common skin condition that results in severe pimple breakouts in the face. It occurs when the hair follicles plug with oil and dead skin cells. It affects the health of the skin and the confidence of the person.

Pigmentation Reduction

Pigmentation is a common condition in most people. The excess production of melanin in the skin gives the skin a dark appearance. We provide advanced treatments that are safe and attested by our dermatologists.

Skin Peels

A skin peel or chemical peel is an intensive skin treatment where active extracts are used to encourage the removal of the dull and damaged outer layer of the skin. It brings out new skin which is healthy, clear and free of blemishes.

Derma Fillers

Derma fillers are safe and are injected under the skin to increase the skin's volume. It brings back the bounce to your skin. We offer advanced dermal filler solutions to give your skin a youthful glow.

Platelet-Rich Plasma (PRP)

This advanced skin treatment can improve your skin's texture and appearance. It is an injection administered to your skin to smoothen the fine lines and wrinkles around the mouth and eyes.
